## **100+ Local Innovation Programs and Counting**

Our Telehealth team facilitates care innovation at the local level. This can be the first step to identify telehealth programs that are suitable to scale across regions and/or commercialize outside of Providence.

We collaborate closely with our local healthcare partners in all seven states to design and develop telehealth solutions that positively impact their patients and care teams.

We bring expertise in all aspects of the telehealth development process for acute, ambulatory and home-based programs, including: ideation; business case development; billing, compliance and legal assessment; clinical and operational workflow and protocol development; technology assessment; implementation and training; and ongoing measurement and optimization.

### **Sampling of Regional Programs**
