## ICD-10 Overview

On January 16, 2009, the U.S. Department of Health and Human Services (HHS) released the [final rule](#) mandating that everyone covered by the [Health Insurance Portability and Accountability Act \(HIPAA\)](#) must implement the International Classification of Diseases, 10th Edition diagnosis and procedure codes ([ICD-10](#)), for medical coding. Given the magnitude of the change, HHS, updated the [final rule](#) on August 24, 2012, which moves the ICD-10 compliance date from the initial proposed deadline of October 1, 2013 to **October 1, 2014**.

On **October 1, 2014**, the ICD-9-CM diagnosis codes will expand from 18,000 unique codes to 140,000 unique codes in ICD-10. This transition to ICD-10 will give providers the language to accurately describe the severity of their patient's illnesses.

With the ICD-10 compliance date less than two years away (October 1, 2014), it is important for providers to **understand the impact** on their office, workflows, and documentation. For providers that own and operate their own practice, preparing starts now. Furthermore, advanced planning and education are crucial to the successful implementation of ICD-10.

Preparing for ICD-10 can be overwhelming. However, [St. Joseph Health](#) is committed to equipping its providers with the necessary tools for successfully implementing ICD-10. The following pages will give an overview of online and on-site training that will be provided prior to October 2014.
