Hospital Equity Measures Report

General Information

Report Type:	Hospital Equity Measures Report
Year:	2025
Hospital Name:	HEALDSBURG HOSPITAL
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106490964
Report Period:	01/01/2025 - 12/31/2025
Status:	Submitted
Due Date:	11/29/2026
Last Updated:	11/23/2026
Hospital Location with Clean Water and Air:	Yes
Hospital Web Address for Equity Report:	providence.org/locations/norcal/healdsburg-district-hospital

Overview

Health and Safety Code Sections 127370-127376 require the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

Laws and Regulations

For more information on Health and Safety Code Sections 127370-127376, please visit the following link by copying and pasting the URL into your web browser:
https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204

Hospital Equity Measures

Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities.

Yes

Provide documentation of policy prohibiting discrimination.

Yes

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferred language	Total number of patients who were asked to report their preferred language	Percentage of patients by preferred language group (%)
English Language	10421	13018	80.1
Spanish Language	2404	13018	18.5
Asian Pacific Islander Languages	27	13018	0.2
Middle Eastern Languages	masked	13018	masked
American Sign Language	masked	13018	masked
Other Languages	155	13018	1.2

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser: https://data.cms.gov/provider-data/topics/hospitals/health-equity

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Yes

CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital collects demographic information, including self-reported race and ethnicity, and/or social determinant of health information on the majority of our patients.

• Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

• Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Yes

CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

• Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Yes

CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

• Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Yes

CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

• Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.

• Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews key performance indicators stratified by demographic and/or social factors.

Yes

Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients 18 years or older for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:
https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

314

Total number of patients admitted to a hospital inpatient stay who were 18 years or older on the date of admission

321

Percentage of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission and screened for all five HRSNs

97.8

Table 2. Screen positive rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of patients who screened positive	Screen positive rate (%)	Number of patients who screened positive and received intervention	Intervention Rate (%)
Food Insecurity	11	3.5	masked	masked
Housing Instability	20	6.4	masked	masked
Transportation Problems	11	3.5	masked	masked
Utility Difficulties	11	3.5	masked	masked
Interpersonal Safety	masked	masked	masked	masked

Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser: https://hcahpsonline.org/en/survey-instruments/

Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

57

Total number of respondents to HCAHPS Question 19

59

Rate of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

96.6

Total number of patients surveyed on HCAHPS Question 19

62

Response rate, or the percentage of people who responded to HCAHPS Question 19

95.2

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Rate of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)
American Indian or Alaska Native					
Asian					
Black or African American

Female-to-male (FTM)/ transgender male/trans man					
Male					
Male-to-female (MTF)/ transgender female/trans woman					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the hospital?"

49

Total number of respondents to HCAHPS Question 17

58

Rate of respondents who responded "yes" to HCAHPS Question 17

84.5

Total number of people surveyed on HCAHPS Question 17

62

Response rate, or the percentage of people who responded to HCAHPS Question 17

93.5

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/

Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:
https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf

Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients of any age with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/Downloads/Modules/PSI/V2023/TechSpecs/PSI_04_Death_Rate_among_Surgical_Inpatients_with_Serious_Treatable_Complications.pdf

Number of in-hospital deaths among patients aged 18-89 years old or obstetric patients with serious treatable complications

California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarean birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser: https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications

Number of NTSV patients with Cesarean deliveries

Total number of nulliparous patients delivered of a live term singleton newborn in vertex presentation

Rate of nulliparous women with a term, singleton baby in a vertex position delivered by cesarean section

Table 7. Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of NTSV patients with cesarean deliveries	Total number of NTSV patients	Rate of NTSV patients with Cesarean deliveries (%)
American Indian or Alaska Native			
Asian			
Black or African American			
Hispanic or Latino			
Middle Eastern or North African			
Multiracial and/or Multiethnic (two or more races)			
Native Hawaiian or Pacific Islander

CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 100 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf

Number of vaginal deliveries among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

Rate of vaginal deliveries per 100 deliveries by patients with previous Cesarean deliveries

Table 8. Vaginal Birth After Cesarean (VBAC) Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser:
https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further

stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser: https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

14

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

204

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

6.9

Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by

stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Rank	Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
1	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)	65 and older	8.9	35 to 49	0	2
2	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Medicare	9	Other	0	2
3	HCAHPS survey: Received information and education	Sex Assigned at Birth	Female	82.8	Male	86.2	1
4	Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Sex Assigned at Birth	Female	96.6	Male	96.7	1
5	HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor	Private	0	Other	0	0

Plan to address disparities identified in the data

HCAHPS Survey - Received Information and Education

Measure and Disparity/Stratification Group

HCAHPS Survey: Received Information and Education, stratified by sex assigned at birth. Female patients reported a lower rate (82.8%) than male patients, the reference group (86.2%).

Best Performing Reference Group

Male patients (86.2%).

Rate Ratio

Rate ratio of 1.

Population Impact

Female patients discharged from Providence Healdsburg Hospital. More consistent, accessible education may improve understanding of medications, follow-up care, and self-management, and improve patient experience and outcomes.

Improvement Goal

- Increase the female patient score from 82.8% to at least 85.0% by December 31st, 2027.

Actions

- After Visit Summary (AVS): Provide and review individualized discharge education and comprehensive AVSs with diagnosis-specific materials, medication instructions, self-care guidance, warning symptoms, and follow-up appointments.
- Communication Processes: Promote interpreter services for patients and families/support

systems who speak or read languages other than English, and provide AVSs, discharge instructions, and education in preferred languages when available.

- Patient Care Boards: Use bedside boards to consistently share the care team, conditions, medications, discharge plans, and patient-specific needs with patients and families/support systems to promote shared decision making.

HCAHPS Survey - Would Recommend Hospital

Measure and Disparity/Stratification Group

HCAHPS Survey: Would Recommend Hospital. Female patients reported a lower rate (96.6%) than male patients, the reference group (96.7%).

Best Performing Reference Group

Male patients (96.7%).

Rate Ratio

Rate ratio of 1.

Population Impact

Maintain equitable patient experience and strengthen communication, responsiveness, care coordination, and engagement for all patients, including the disparity group.

Improvement Goal

- Maintain a 96% or greater Would Recommend Hospital score among female patients by December 31st, 2027.

Actions

- Patient Care Boards and Communication Processes: Continue the bedside boards and language access practices described above.
- Leadership/Staff Rounding and Service Recovery:
- Bedside shift reports with patients and families whenever possible to promote open communication, transparency, and discharge preparation.
- Rounding by the Patient Relations Specialist to address patient and family concerns in real time.

HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

Measure and Stratification Groups

Disparities were identified by age and expected payor. Age 65+ (8.9%) versus age 35-49 (4.5%) and Medicare (9.0%) versus other payors (4.5%) showed the highest disparities. Private Insurance and Medicaid (0.0%) had no observed readmissions versus other payors (4.5%).

Best Performing Reference Group

Patients aged 35-49 (4.5%) and other payors (4.5%); Private Insurance and Medicaid (0.0%) also outperformed other payors.

Rate Ratio

The rate ratio is 2.0 for both disparities (about twice the reference rate) and 0.0 for Private Insurance and Medicaid, whose small volumes in a Critical Access Hospital warrant ongoing monitoring.

Population Impact

Adults 65+, Medicare beneficiaries, and patients with chronic disease, complex medication regimens, or social-driver barriers. Better transitions of care may improve outcomes, reduce avoidable utilization, and advance health equity across payers.

Improvement Goal

- Reduce readmissions among patients 65+ from 8.9% to 7.5% or lower by December 31st, 2027.
- Reduce readmissions among Medicare beneficiaries from 9.0% to 7.5% or lower by December 31st, 2027.
- Maintain 0.0% readmissions for Private Insurance and Medicaid and monitor for emerging payor disparities.

Actions

- Risk Stratification/Discharge Planning: Use the LACE tool to identify high-risk patients early and begin interdisciplinary discharge planning at admission.
- Address Social Drivers of Health (SDOH): Assess transportation, medication affordability, food, housing/utility stability, isolation, caregiver stress, and health literacy barriers, and refer to community services via FindHelp and other platforms.
- Readmission Review Process: Conduct real-time reviews and interviews of Medicare and 65+ patients so needs are addressed by discharge, and hold weekly multidisciplinary case reviews at the Readmissions Reduction Committee to identify common and avoidable causes.
- Standardized Transitional Care: Maintain medication reconciliation, teach-back discharge education, follow-up scheduling before discharge, and post-discharge coordination for high-risk patients.
- Continuous Performance Monitoring: Review payer-specific readmission data quarterly through the Readmissions Reduction Committee to identify emerging trends.

Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

Person-centered care

At Healdsburg Hospital, we share the Providence mission: “We are steadfast in serving all, especially those who are poor and vulnerable.”

Our core values—compassion, dignity, justice, excellence, and integrity—are the foundation of everything we do. These values are not just words; they are lived through our policies, communications, and daily actions. From the moment an applicant expresses interest in joining our team, through onboarding and throughout their career, these principles guide how we interact with patients, families, and each other.

Person-centered care means recognizing that every patient’s health journey is unique. We place the patient at the center of all decisions and ensure care is tailored to their needs, preferences, and cultural background. Interpreter services are available through phone and video platforms, allowing patients to communicate in their preferred language without barriers. All patient education materials come in multiple languages and are translated by certified medical interpreters to ensure accuracy and cultural appropriateness. Consent forms are written in clear, understandable language so patients never agree to a procedure without fully understanding its purpose.

Beyond communication, we provide programs that support patients during and after hospitalization. Our Care Network program bridges the gap between hospital and home, focusing on culturally competent care and addressing health disparities. We also offer home health services, case management, and community health workers to assist with discharge planning, medication access, and follow-up appointments. These resources are especially critical for Hispanic/Latinx and rural populations, who experience higher rates of chronic illness and limited access to care. By addressing social determinants of health and removing barriers, we help patients heal in environments that support their well-being.

Measurement and Accountability: We monitor interpreter utilization rates, HCAHPS scores, and social determinants of health screenings, and we follow up on positive screens to ensure continuity of care. Patient feedback is gathered through Press Ganey surveys, and we are exploring patient

advisory councils to guide improvements. These efforts reflect our promise: “Know me, care for me, ease my way.” Through collaboration, cultural sensitivity, and innovation, Healdsburg Hospital strives to deliver care that honors the dignity and uniqueness of every person.

Patient safety

Patient safety at Providence Healdsburg Hospital is the foundation of all clinical care. We employ evidence-based protocols, rigorous audits, and standardized checklists to minimize risk and prevent harm. Our initiatives—such as early identification of high-risk patients, timely completion of assessments, and enhanced discharge education—are designed to ensure safe transitions across care settings.

We are actively working toward becoming a High Reliability Organization (HRO), embedding reliability principles into every aspect of care delivery. This means maintaining a constant preoccupation with failure, resisting oversimplification of complex issues, and fostering sensitivity to operations. We emphasize resilience and rapid recovery from unexpected events and defer to expertise by empowering staff at all levels to speak up and act on safety concerns.

Our robust reporting system, grounded in a Just Culture, encourages staff to report errors and near misses without fear of punitive action. This transparency fosters learning and continuous improvement, ensuring that safety is not only a priority but a shared responsibility across the organization. AB 1204 reinforces the importance of safety through its mandate to reduce disparities and improve outcomes. By embedding equity-focused interventions into our workflows and monitoring compliance through stratified data, we address systemic risks that disproportionately affect vulnerable populations. Continuous improvement cycles, informed by real-time data and multidisciplinary reviews, allow us to identify gaps and implement corrective actions promptly.

Patient safety is not limited to clinical procedures; it encompasses communication, coordination, and education. Through proactive planning and collaboration, we create a care environment where every patient receives safe, reliable, and equitable treatment.

Addressing patient social drivers of health

Our organization recognizes that health outcomes are influenced by more than clinical care alone. Social Determinants (SDOH) of Health such as housing stability, food security, transportation access, education, and economic opportunity play a critical role in shaping patient well-being. Addressing these factors is essential to achieving health equity and improving overall quality of care.

We systematically identify and address social needs that impact health outcomes. To achieve this, we screen all patients for key social determinants, including housing, food, transportation, and financial insecurity, and stratify findings by race, ethnicity, language, and other demographics to uncover disparities. We partner with community-based organizations to connect patients to resources and provide culturally and linguistically appropriate support. We use FindHelp, an electronic medical record search tool that assists caregivers in finding community-based social services that address social determinants of health. FindHelp can generate a comprehensive list of local resources patients need to maintain their health and well-being. Additionally, we integrate SDOH data into care planning and population health strategies to ensure interventions are equitable and responsive to the unique needs of our diverse patient population.

Performance in the priority area continued

Performance across all of the following priority areas.

Effective treatment

Effective treatment at Providence Healdsburg Hospital is rooted in evidence-based practices and tailored to individual patient needs. Our targeted action plans demonstrate how best practices are translated into measurable improvements that strengthen transitions of care, enhance patient education, and address barriers to recovery. These initiatives ensure treatment plans are comprehensive, equitable, and sustainable beyond hospitalization.

We are committed to continuously evolving and enhancing all measures submitted to CMS and The Joint Commission. This includes refining workflows, improving documentation accuracy, and leveraging real-time data to identify gaps and implement corrective actions. Our teams actively review performance on core measures, patient safety indicators, and readmission metrics to ensure compliance and drive improvement. This work is supported by multidisciplinary collaboration and the integration of best practices from national benchmarks and evidence-based guidelines into daily workflows. Our commitment aligns with national quality standards and regulatory expectations, including those set by leading accrediting and performance organizations. By embedding these strategies into standardized workflows and leveraging data—such as readmission reviews and related analysis, we ensure compliance while advancing quality goals. Continuous monitoring of outcomes, coupled with structured audits and feedback loops, drives improvement across clinical processes and patient experience.

This approach directly supports HCAI AB 1204 requirements by identifying disparities, implementing targeted interventions, and tracking measurable progress through stratified data. Our work reflects the law’s emphasis on equity, transparency, and continuous improvement, ensuring that care delivery meets both regulatory standards and community needs. Ultimately, effective treatment is more than meeting benchmarks—it is about delivering safe, equitable, and person-centered care. Through collaboration, education, and proactive discharge planning, we empower patients to manage their health beyond hospitalization, reducing readmissions and improving long-term outcomes.

Care coordination

Care coordination is especially important for those patients with complex medical and social determinants of health needs. Providence NorCal provides a robust continuum weaving inpatient care management to our community based complex care management program, CARE Network.

CARE Network is a mission driven no cost program serving highly vulnerable individuals through intensive, community-based medical and psychosocial care management. Services are provided to community residents with complex health, behavioral, and social challenges, including the following: Homelessness and housing stability, one or multiple chronic conditions, lacking basic needs mental health challenges, substance use disorders, inadequate financial resources, limited social supports, language/health literacy barriers.

Inpatients are screened and those with complex needs are referred to CARE Network upon discharge. CARE Network provides telephonic and in person home visits to support patients with medication management, follow up medical appointments, transportation, in addition to food and other SDoH. We work closely with our FQHCs and other community-based organizations to link patients to services.

Behavioral health needs are supported through collaboration with a substance use navigator, and behavioral health follow-up scheduling is embedded in discharge planning. Social determinants of health are documented in Epic and visible to CARE Network teams when referrals are placed. Digital tools such as MyChart and text reminders help patients stay engaged in their care.

We work closely with our community-based organizations to link patients to services. On the acute side, the readmission committee meets weekly to review cases and the fourth week of each month to plan improvements. Metrics such as CARE Network enrollment rates, reduced ED visits, and improved medication adherence are tracked, and stratified data is used to monitor equity, though prioritization for multiple SDOH needs and telehealth expansion remain opportunities for

development.

Through these efforts, Providence NorCal ensures that care coordination is comprehensive, culturally responsive, and focused on reducing barriers for the most vulnerable populations.

Access to care

We serve all, with special attention to the poor and vulnerable. One way Providence supports access to care for all is through our financial assistance program. We inform the public of this program by posting notices in high volume inpatient and outpatient service areas and at locations where a patient may pay their bill. Notices include contact information on how a patient can obtain more information on financial assistance as well as where to apply for assistance. These notices are posted in English and Spanish and any other languages that are representative of 5% or greater of patients in the hospital's service area. All patients who demonstrate lack of financial coverage by third party insurers are offered an opportunity to complete the Patient Financial Assistance Application and are offered information, assistance, and referral as appropriate to government sponsored programs for which they may be eligible.

Beyond financial assistance, we provide robust community benefit contributions that deliver direct services such as CARE Network, mobile dental units in Napa and Sonoma, mobile health clinics in Sonoma, free community health screenings, and community resource centers in Humboldt. These services focus on underserved, vulnerable populations and provide clinical care and navigation services to ensure access to care. We also leverage services to reach rural and transportation-limited populations, expanding access to specialty care and follow-up visits.

Our commitment to access is reinforced by EMTALA compliance and charity care policies, ensuring that emergency care is provided regardless of ability to pay. Through community partnerships, referrals, and outreach, we strive to remove barriers and connect patients to the care they need. These efforts reflect our mission and values, ensuring that every person, especially those who are poor and vulnerable, has equitable access to health services.

Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide?

Yes
