# **Hospital Equity Measures Report**

#### **General Information**

Report Type: Hospital Equity Measures Report

Year: 2024

Hospital Name: HEALDSBURG HOSPITAL Facility Type: General Acute Care Hospital

Hospital HCAI ID: 106490964

Report Period: 1/1/2024 - 12/31/2024

Status: Submitted

Due Date: 11/29/2025

Last Updated: 11/24/2025

Hospital Location with Clean Water and Air: Y

Hospital Web Address for Equity Report: https://www.providence.org/about/health-equity

#### Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

# **Laws and Regulations**

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\_id=202120220AB1204

# **Hospital Equity Measures**

#### **Joint Commission Accreditation**

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce -health-care-disparities/

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Υ

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Υ

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

60754

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	48631	60754	80
Spanish Language	11417	60754	18.8
Asian Pacific Islander Languages	84	60754	0.1
Middle Eastern Languages	33	60754	0.1
American Sign Language	0	60754	0
Other Languages	589	60754	1

# Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:

https://data.cms.gov/provider-data/topics/hospitals/health-equity

Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Υ

#### CMS HCHE Measure Domain 2: Data Collection (Yes/No)

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

• Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Υ

#### CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

• Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Υ

#### CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

• Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Υ

#### CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Υ

### Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

269

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

275

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs 97.8

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	15	5.6	10	3.6
Housing Instability	27	10	12	4.4
Transportation Problems	12	4.5	5	1.8
Utility Difficulties	14	5.2	8	2.9
Interpersonal Safety	2	0.7	2	0.7

### **Core Quality Measures for General Acute Care Hospitals**

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser: https://hcahpsonline.org/en/survey-instruments/

## **Patient Recommends Hospital**

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

63

Total number of respondents to HCAHPS Question 19

66

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

95.5

Total number of people surveyed on HCAHPS Question 19

67

Response rate, or the percentage of people who responded to HCAHPS Question 19 98.5

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Non-conforming gender					
Additional gender category or other					

# **Patient Received Information in Writing**

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

52

Total number of respondents to HCAHPS Question 17

58

Percentage of respondents who responded "yes" to HCAHPS Question 17 89.7

Total number of people surveyed on HCAHPS Question 17

67

Response rate, or the percentage of people who responded to HCAHPS Question 17 86.6

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/

### **Pneumonia Mortality Rate**

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser: https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\_20\_Pneumonia\_Mortality\_Rate.pdf

### **Death Rate among Surgical Inpatients with Serious Treatable Complications**

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

# California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

# CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\_22\_Vaginal\_Birth\_After\_Cesarean\_(VBAC)\_Delivery\_Rate\_Uncomplicated.pdf

# **CMQCC Exclusive Breast Milk Feeding Rate**

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

### **HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate**

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\_ADA.pdf

# HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

Suppressed

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

Suppressed

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older
Suppressed

# **Health Equity Plan**

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

# **Top 10 Disparities**

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAHPS survey: Received information and education	Sex Assigned at Birth			Female	100	1.2
Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Sex Assigned at Birth			Male	97.1	1
Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey: Would recommend hospital.	Race and/or Ethnicity			White	96.4	1
HCAHPS survey: Received information and education	Race and/or Ethnicity			Hispanic or Latino	94.4	1

#### Plan to address disparities identified in the data

HCAHPS survey: Q. 17 Received information and education (H-COMP-6-Y-P) The disparity groups for the patient population to improve the HCAHPS survey question on "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the hospital" include: - Sex assigned at birth: Male - Race: White Measurable Goal: Improve the HCAHPS Top Box score for survey question "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the hospital" by 1% for white and male patient populations. Target Date: December 31, 2026. Actions: - Practice "Teach Back" method to educate and validate patient/caregiver understanding of symptoms or health problems to look out for after they leave the hospital. - Provide each patient/family member with the After Visit Summary (AVS) at discharge. The AVS/discharge summary document explains why they were hospitalized, medications to continue/stop, signs/symptoms to watch for, when to seek help, how to care for self, follow-up appointments. - Provide verbal and written information and education in patients' preferred language. - Refer patients with high risk for readmission and complex treatment regimens to Providence Care Network for outpatient treatment plan support. - Round on patients asking scripted questions regarding the patient's perception of how care is being delivered and to allow the opportunity to provide information/education to the patient/family. (Unit Leaders) - Ask patients "What Matters Most" and post on patient board (Patient's RNs). Responses posted for the care team to see and incorporate into the care plan. Data Measure: HCAHPS Top Box score for survey question "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the hospital". HCAHPS survey: Q. 19 Would Recommend Hospital (H-RECMND-DY) The disparity groups for the patient population to improve the HCAHPS survey question on "Would you recommend this hospital to your friends and family?" include: - Sex assigned at birth: Female - Race: Hispanic/Latino Measurable Goal: Improve the HCAHPS Top Box score for survey question "Would you recommend this hospital to your friends and family?" by 1%. Target Date: December 31, 2026. Actions: (1) Enhance PERSON-CENTERED CARE o Ask patients "What Matters Most?" and post on patient board (Patient's RNs). Responses posted for care team to see and incorporate into the care plan. o Personalize and update information for the patient/family regarding who their care team is, activity level, diet status, patient

specific needs, and a section for patients/families to write questions. o Screen all patients for preferred language, ensure qualified interpreters are available for non-English speaking patients. Provide educational materials in patient's preferred language to support understanding and engagement, enabling every patient to fully comprehend their care plan and actively participate in decision-making. o Utilize interpreter services for patients with preferred language other than English. (2) Incorporate Social Determinants of Health (SDoH) positive screening into care plan. o FindHelp is used to generate a comprehensive list of local resources for housing, utilities, food, transportation to support health and well-being to support excellent health outcomes. Data Measure: HCAHPS Top Box score for survey question Would you recommend this hospital to your friends and family?"

### Performance in the priority area

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

#### Person-centered care

Overview: Our organization prioritizes person-centered care as a cornerstone of health equity. We recognize that patient voices, cultural context, and language access are essential to delivering high-quality, equitable care. Equity Considerations: Our organization is committed to advancing health equity by embedding person-centered principles into every aspect of care delivery. We actively engage patients and their families in care planning to ensure that individual preferences and goals guide treatment decisions. To identify and address disparities, we collect and analyze patient experience data stratified by race, ethnicity, and language for all patients responding to the survey. Additionally, we consistently screen all patients for their preferred language and ensure that qualified interpreters are available for every non-English encounter. We also provide educational materials in patients' preferred language to support understanding and engagement, enabling every patient to fully comprehend their care plan and actively participate in decision-making. These practices reflect our dedication to delivering equitable, respectful, and responsive care for all individuals. Metrics and Improvements: 1) Complete baseline assessment of care plans documented with patient-stated goals. 2) Analyze patient experience data, identify disparities, and implement targeted improvements. 3) Improve the use of interpreters by 10%

#### Patient safety

Overview: Patient safety is a core component of our mission to provide high-quality, equitable care. We recognize that safety outcomes can vary across demographic groups, and we are committed to identifying and eliminating disparities in harm prevention. Equity Considerations: We are committed to advancing patient safety through an equity lens by implementing strategies that minimize harm for all individuals. We monitor and stratify key safety indicators such as falls, medication errors, and hospital-acquired infections by race, ethnicity, language, and other demographic factors to identify disparities and implement targeted interventions. To strengthen our approach, we provide equity-focused training for all clinical staff on bias mitigation. Additionally, we engage patients and families in safety efforts by educating them to report concerns and participate actively in harm prevention. Metrics and Improvements: 1) Conduct quarterly reviews of safety data stratified by demographic factors. 2) Develop and implement an action plan based on data analysis. 3) Engage the Health Equity Committee to provide governance and oversight for improvement initiatives.

Addressing patient social drivers of health

Overview: Our organization recognizes that health outcomes are influenced by more than clinical care alone. Social Determinants of Health such as housing stability, food security, transportation access, education, and economic opportunity play a critical role in shaping patient well-being. Addressing these factors is essential to achieving health equity and improving overall quality of care. Equity Considerations: We systematically identify and address social needs that impact health outcomes. To achieve this, we screen all patients for key social determinants, including housing, food, transportation, and financial insecurity, and stratify findings by race, ethnicity, language, and other demographics to uncover disparities. Currently, our screening rate is 95%. We partner with community-based organizations to connect patients to resources and provide culturally and linguistically appropriate support. We use FindHelp an electronic medical record search tool that assists caregivers in finding community-based social services that address social drivers of health. FindHelp can generate a comprehensive list of local resources patients need to maintain their health and well-being. Additionally, we integrate SDOH data into care planning and population health strategies to ensure interventions are equitable and responsive to the unique needs of our diverse patient population. Metrics and Improvements: 1) Analyze social drivers of health follow-up interventions data and determine baseline data 2) Develop and implement an action plan based on data and current state analysis 3) Engage the Health Equity Committee to provide governance and oversight for improvement initiatives.

## Performance in the priority area continued

Performance across all of the following priority areas.

#### Effective treatment

Overview: We provide evidence-based, timely, and appropriate clinical care to patients. Effective treatment ensures that every individual receives care that aligns with best practices, clinical guidelines, and their unique health needs, regardless of demographic or socioeconomic factors. Equity Considerations: We actively monitor treatment outcomes and adherence to evidence-based protocols across demographic groups to identify and address disparities. Clinical teams receive training in bias mitigation to ensure equitable decision-making. Additionally, we integrate patient preferences and social context into treatment planning and provide language access to support understanding and adherence. These efforts reflect our commitment to delivering high-quality, equitable care that improves outcomes for all populations. Metrics and Improvements: 1) Stratify clinical outcomes and adherence to evidence-based protocols by race, ethnicity, language, and other demographic factors 2) Identify disparities and implement targeted interventions to improve equity in treatment effectiveness. 3) Engage the Health Equity Committee to provide governance and oversight for improvement initiatives.

#### Care coordination

Overview: Delivering seamless and coordinated care reduces fragmentation and improves patient outcomes. Effective care coordination ensures smooth transitions between care settings such as hospital to home and promotes continuity of care for all patients, regardless of demographic or socioeconomic factors. Equity Considerations: we monitor transitions of care such as hospital discharge to home across demographic groups to identify and address disparities. We utilize patient navigators and community health workers to support individuals with complex needs and social barriers, providing culturally and linguistically appropriate guidance throughout the care continuum. Additionally, we track follow-up appointment completion rates by race, ethnicity, and language, implementing targeted interventions to close gaps in continuity of care. These efforts reflect our dedication to reducing fragmentation and improving health outcomes for diverse populations. Metrics and Improvements: 1) Develop standardized discharge and transition protocols that include

culturally and linguistically appropriate instructions. 2) Monitor transition success rates and identify disparities across demographic groups 3) Develop and implement an action plan based on data and current state analysis 4) Track follow-up appointment completion rates by race, ethnicity, language, and other demographics.

#### Access to care

Overview: Access to care is defined as the ability of patients to obtain timely, culturally appropriate services. Our organization is committed to removing barriers that prevent individuals from receiving the care they need, including challenges related to transportation, clinic hours, insurance coverage, and language access. Ensuring equitable access is essential to improving health outcomes and fostering trust within the communities we serve. Equity Considerations: We actively identify and address barriers to care by monitoring appointment availability, wait times, and service utilization across demographic groups. Disparities in access such as longer wait times or limited appointment options for certain populations are analyzed and addressed through targeted interventions. To improve access, we have expanded telehealth services and implemented transportation assistance programs. Additionally, we ensure language access by screening for preferred language and providing qualified interpreters and culturally tailored materials. These efforts reflect our commitment to delivering timely, culturally appropriate care for all patients. Metrics and Improvements: 1) track wait times, and service utilization stratified by race, ethnicity, language, and other demographic factors 2) Identify disparities and develop strategies to improve equity in access.

#### **Methodology Guidelines**

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)

Υ
