

## LABEL READING FOR CARBOHYDRATES

With most foods, you can use the food label on the package to count carbohydrates.

### Step 1:

Find the **Serving Size** at the very top of the label. This tells you the size of one serving. All the information on the food label is based on this serving size. Compare the amount you actually eat to the serving size listed. For example, if you eat twice as much, be sure to double all the other numbers listed on the label.

### Step 2:

Look for the **Total Carbohydrate** grams. This line shows you all the carbohydrates (in grams) in one serving, including sugars. **Reminder: Do not use the number listed for Sugars.**

### Step 3:

Check for **Dietary Fiber** under Total Carbohydrate. Aim for foods that contain at least 3 to 5 grams fiber per serving. Fiber helps slow the breakdown of carbohydrate into sugar.
