

### **COMMODE AID:**

The commode aid is very versatile. It is designed for use as an elevated toilet seat when used with the splashguard, or as a commode when placed against a wall and used with a pail. It has adjustable legs, is very sturdy and requires no installation so it can be easily moved from place to place.

### **RAISED TOILET SEAT:**

A raised toilet seat is designed to assist a patient who has difficulty getting up or down on a toilet. Several style and price ranges are available. This item can be used with a toilet frame for additional safety.

### **TOILET FRAME:**

A toilet frame (sometimes called versa frame) is designed to provide added safety for a patient by having a railing on both sides of the toilet to support and guard against falls. It is adjustable in height and is easily installed. It is generally used with a raised toilet seat.

## BATH SAFETY EQUIPMENT

### PURPOSE:

Many accidents occur in the home bathroom, due to a lack of safety measures or inadequate equipment. Bathroom safety equipment can assist the patient and at the same time relieve apprehension by providing security. Listed below are a few items that can help and minimize the risk of injury

### BATHTUB SAFETY RAILS:

These rails are sturdy and assure a firm hold for moving in and out of the tub area. They can be quickly attached and do not require permanent installation. Many styles, sizes and price ranges are available. NOTE: These rails are not designed for fiberglass tubs.

### WALL MOUNTED GRAB BARS:

Wall mounted grab bars are available in many sizes. They are available in white vinyl, almond or chrome. They can be easily installed on any type of wood or gypsum wall surface. The must be mounted over studs or with “molly” bolts.

### BATH BENCHES:

Bath benches are an essential aid for persons who have difficulty sitting down or getting up from the bottom of the tub. Added safety in bathing is assured when the patient remains seated on a bath bench. Bath benches are available with or without backs and have adjustable legs.

### BATH TRANSFER BENCHES:

The bath transfer bench is used for the person who has difficulty moving over the tub rim. The person simply sits on the extended portion, then swings their legs over the side of the tub and slides inward until they are safely seated inside the tub. Transfer benches are available with or without padding and with cutouts for ease of cleaning. They have adjustable legs.

### HAND HELD SHOWER EXTENSIONS:

The hand held shower extension is designed for use with a bath or transfer bench. It allows the patient to direct the water flow and turn it on and off at the showerhead. Many styles and price ranges are available.
