

# Hospital Equity Measures Report

## General Information

Report Type:	Hospital Equity Measures Report
Year:	2024
Hospital Name:	PROVIDENCE ST. MARY MEDICAL CENTER
Facility Type:	General Acute Care Hospital
Hospital HCAI ID:	106361343
Report Period:	01/01/2024 - 12/31/2024
Status:	Submitted
Due Date:	11/29/2025
Last Updated:	11/25/2025
Hospital Location with Clean Water and Air:	Y
Hospital Web Address for Equity Report:	<a href="https://providence.org/locations/socal/st-mary-medical-center">providence.org/locations/socal/st-mary-medical-center</a>

## Overview

Assembly Bill No. 1204 requires the Department of Health Care Access and Information (HCAI) to develop and administer a Hospital Equity Measures Reporting Program to collect and post summaries of key hospital performance and patient outcome data regarding sociodemographic information, including but not limited to age, sex, race/ethnicity, payor type, language, disability status, and sexual orientation and gender identity.

Hospitals (general acute, children's, and acute psychiatric) and hospital systems are required to annually submit their reports to HCAI. These reports contain summaries of each measure, the top 10 disparities, and the equity plans to address the identified disparities. HCAI is required to maintain a link on the HCAI website that provides access to the content of hospital equity measures reports and equity plans to the public. All submitted hospitals are required to post their reports on their websites, as well.

## Laws and Regulations

For more information on Assembly Bill No. 1204, please visit the following link by copying and pasting the URL into your web browser:

[https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill\\_id=202120220AB1204](https://leginfo.legislature.ca.gov/faces/billTextClient.xhtml?bill_id=202120220AB1204)

## Hospital Equity Measures

### Joint Commission Accreditation

General acute care hospitals are required to report three structural measures based on the Commission Accreditation's Health Care Disparities Reduction and Patient-Centered Communication Accreditation Standards. For more information on these measures, please visit the following link by copying and pasting the URL into your web browser:

<https://www.jointcommission.org/standards/r3-report/r3-report-issue-36-new-requirements-to-reduce-health-care-disparities/>

The first two structural measures are scored as "yes" or "no"; the third structural measure comprises the percentages of patients by five categories of preferred languages spoken, in addition to one other/unknown language category.

Designate an individual to lead hospital health equity activities (Y = Yes, N = No).

Y

Provide documentation of policy prohibiting discrimination (Y = Yes, N = No).

Y

Number of patients that were asked their preferred language, five defined categories and one other/unknown languages category.

407352

Table 1. Summary of preferred languages reported by patients.

Languages	Number of patients who report preferring language	Total number of patients	Percentage of total patients who report preferring language (%)
English Language	362595	407352	89
Spanish Language	39618	407352	9.7
Asian Pacific Islander Languages	1446	407352	0.4
Middle Eastern Languages	1086	407352	0.3
American Sign Language	143	407352	0
Other Languages	2464	407352	0.6

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure**

There are five domains that make up the CMS Hospital Commitment to HCHE measures. Each domain is scored as "yes" or "no." In order to score "yes," a general acute care hospital is required to confirm all the domain's attestations. Lack of one or more of the attestations results in a score of "no." For more information on the CMS Hospital Commitment to HCHE measures, please visit the following link by copying and pasting the URL into your web browser:  
<https://data.cms.gov/provider-data/topics/hospitals/health-equity>

**Centers for Medicare & Medicaid Services (CMS) Hospital Commitment to Health Equity Structural (HCHE) Measure Domain 1: Strategic Planning (Yes/No)**

- Our hospital strategic plan identifies priority populations who currently experience health disparities.
- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital strategic plan outlines specific resources that have been dedicated to achieving our equity goals.
- Our hospital strategic plan describes our approach for engaging key stakeholders, such as community-based organizations.

Y

**CMS HCHE Measure Domain 2: Data Collection (Yes/No)**

- Our hospital strategic plan identifies healthcare equity goals and discrete action steps to achieve these goals.
- Our hospital has training for staff in culturally sensitive collection of demographics and/or social determinant of health information.

- Our hospital inputs demographic and/or social determinant of health information collected from patients into structured, interoperable data elements using a certified electronic health record (EHR) technology.

Y

#### CMS HCHE Measure Domain 3: Data Analysis (Yes/No)

- Our hospital stratifies key performance indicators by demographic and/or social determinants of health variables to identify equity gaps and includes this information in hospital performance dashboards.

Y

#### CMS HCHE Measure Domain 4: Quality Improvement (Yes/No)

- Our hospital participates in local, regional or national quality improvement activities focused on reducing health disparities.

Y

#### CMS HCHE Measure Domain 5: Leadership Engagement (Yes/No)

- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually reviews our strategic plan for achieving health equity.
- Our hospital senior leadership, including chief executives and the entire hospital board of trustees, annually review key performance indicators stratified by demographic and/or social factors.

Y

### **Centers for Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH)**

General acute care hospitals are required to report on rates of screenings and intervention rates among patients above 18 years old for five health related social needs (HRSN), which are food insecurity, housing instability, transportation problems, utility difficulties, and interpersonal safety. These rates are reported separately as being screened as positive for any of the five HRSNs, positive for each individual HRSN, and the intervention rate for each positively screened HRSN. For more information on the CMS SDOH, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cms.gov/priorities/innovation/key-concepts/social-drivers-health-and-health-related-social-needs>

Number of patients admitted to an inpatient hospital stay who are 18 years or older on the date of admission and are screened for all of the five HRSN

9221

Total number of patients who are admitted to a hospital inpatient stay and who are 18 years or older on the date of admission

9426

Rate of patients admitted for an inpatient hospital stay who are 18 years or older on the date of admission, were screened for an HRSN, and who screened positive for one or more of the HRSNs

97.8

Table 2. Positive screening rates and intervention rates for the five Health Related Social Needs of the Centers of Medicare & Medicaid Services (CMS) Social Drivers of Health (SDOH).

Social Driver of Health	Number of positive screenings	Rate of positive screenings (%)	Number of positive screenings who received intervention	Rate of positive screenings who received intervention (%)
Food Insecurity	256	2.8	113	1.2
Housing Instability	453	4.9	168	1.8
Transportation Problems	234	2.5	80	0.8
Utility Difficulties	270	2.9	107	1.1
Interpersonal Safety	57	0.6	19	0.2

## Core Quality Measures for General Acute Care Hospitals

There are two quality measures from the Hospital Consumer Assessment of Healthcare Providers and Systems (HCAHPS) survey. For more information on the HCAHPS survey, please visit the following link by copying and pasting the URL into your web browser:

<https://hcahpsonline.org/en/survey-instruments/>

## Patient Recommends Hospital

The first HCAHPS quality measure is the percentage of patients who would recommend the hospital to friends and family. For this measure, general acute care hospitals provide the percentage of patient respondents who responded "probably yes" or "definitely yes" to whether they would recommend the hospital, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for the percentages. The percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 19.

Number of respondents who replied "probably yes" or "definitely yes" to HCAHPS Question 19, "Would you recommend this hospital to your friends and family?"

363

Total number of respondents to HCAHPS Question 19

383

Percentage of total respondents who responded "probably yes" or "definitely yes" to HCAHPS Question 19

94.8

Total number of people surveyed on HCAHPS Question 19

389

Response rate, or the percentage of people who responded to HCAHPS Question 19

98.5

Table 3. Patient recommends hospital by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

Race and/or Ethnicity	Number of "probably yes" or "definitely yes" responses	Total number of responses	Percent of "probably yes" or "definitely yes" responses (%)	Total number of patients surveyed	Response rate of patients surveyed (%)

Male					
Male-to-female (MTF)/ transgender female/trans					
Non-conforming gender					
Additional gender category or other					
Not disclosed					

## Patient Received Information in Writing

The second HCAHPS quality measure is the percentage of patients who reported receiving information in writing on symptoms and health problems to look out for after leaving the hospital. General acute care hospitals are required to provide the percentage of patient respondents who responded "yes" to being provided written information, the percentage of the people who responded to the survey (i.e., the response rate), and the inputs for these percentages. These percentages and inputs are stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding HCAHPS question number is 17.

Number of respondents who replied "yes" to HCAHPS Question 17, "During this hospital stay, did you get information in writing about what symptoms or health problems to look out for after you left the

hospital?"

311

Total number of respondents to HCAHPS Question 17

366

Percentage of respondents who responded "yes" to HCAHPS Question 17

85

Total number of people surveyed on HCAHPS Question 17

389

Response rate, or the percentage of people who responded to HCAHPS Question 17

94.1

Table 4. Patient reports receiving information in writing about symptoms or health problems by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## Agency for Healthcare Research and Quality (AHRQ) Indicators

General acute care hospitals are required to report on two indicators from the Agency for Healthcare Research and Quality (AHRQ). For general information about AHRQ indicators, please visit the following link by copying and pasting the URL into your web browser:  
<https://qualityindicators.ahrq.gov/>

### Pneumonia Mortality Rate

The Pneumonia Mortality Rate is defined as the rate of in-hospital deaths per 1,000 hospital discharges with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission for patients ages 18 years and older. General acute care hospitals report the Pneumonia Mortality Rate by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Inpatient Quality Indicator is 20. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:  
[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_20\\_Pneumonia\\_Mortality\\_Rate.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_20_Pneumonia_Mortality_Rate.pdf)

Number of in-hospital deaths with a principal diagnosis of pneumonia or a principal diagnosis of sepsis with a secondary diagnosis of pneumonia present on admission

## Death Rate among Surgical Inpatients with Serious Treatable Complications

The Death Rate among Surgical Inpatients with Serious Treatable Complications is defined as the rate of in-hospital deaths per 1,000 surgical discharges among patients ages 18-89 years old or obstetric patients with serious treatable complications. General acute care hospitals report this measure by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The corresponding AHRQ Patient Safety Indicator is 04. For more information about this indicator, please visit the following link by copying and pasting the URL into your web browser:

## California Maternal Quality Care Collaborative (CMQCC) Core Quality Measures

There are three core quality maternal measures adopted from the California Maternal Quality Care Collaborative (CMQCC).

### CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate

The CMQCC Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth Rate is defined as nulliparous women with a term (at least 37 weeks gestation), singleton baby in a vertex position delivered by cesarian birth. General acute care hospitals report the NTSV Cesarean Birth Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information, please visit the following link by copying and pasting the URL into your web browser:

<https://www.cmqcc.org/quality-improvement-toolkits/supporting-vaginal-birth/ntsv-cesarean-birth-measure-specifications>

## CMQCC Vaginal Birth After Cesarean (VBAC) Rate

The CMQCC Vaginal Birth After Cesarean (VBAC) Rate is defined as vaginal births per 1,000 deliveries by patients with previous Cesarean deliveries. General acute care hospitals report the VBAC Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The VBAC Rate uses the specifications of AHRQ Inpatient Quality Indicator 22. For more information, please visit the following link by copying and pasting the URL into your web browser:

[https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI\\_22\\_Vaginal\\_Birth\\_After\\_Cesarean\\_\(VBAC\)\\_Delivery\\_Rate\\_Uncomplicated.pdf](https://qualityindicators.ahrq.gov/Downloads/Modules/IQI/V2023/TechSpecs/IQI_22_Vaginal_Birth_After_Cesarean_(VBAC)_Delivery_Rate_Uncomplicated.pdf)

Number of vaginal delivery among cases with previous Cesarean delivery that meet the inclusion and exclusion criteria

Suppressed

Total number of birth discharges with previous Cesarean delivery that meet the inclusion and exclusion criteria

Suppressed

Rate of vaginal delivery per 1,000 deliveries by patients with previous Cesarean deliveries

Suppressed

## CMQCC Exclusive Breast Milk Feeding Rate

The CMQCC Exclusive Breast Milk Feeding Rate is defined as the newborns per 100 who reached at least 37 weeks of gestation (or 3000g if gestational age is missing) who received breast milk

exclusively during their stay at the hospital. Other criteria are that the newborns did not go to the neonatal intensive care unit (NICU), transfer, or die, did not reflect multiple gestation, and did not have codes for parenteral nutrition or galactosemia. General acute care hospitals report the Exclusive Breast Milk Feeding Rate by race and/or ethnicity, maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. The CMQCC Exclusive Breast Milk Feeding Rate uses the Joint Commission National Quality Measure PC-05. For more information, please visit the following link by copying and pasting the URL into your web browser: <https://manual.jointcommission.org/releases/TJC2024B/MIF0170.html>

Number of newborn cases that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

113

Total number of newborn cases born in the hospital that meet the inclusion and exclusion criteria

238

Rate of newborn cases per 100 that were exclusively fed breast milk during their hospital stay and meet the inclusion and exclusion criteria

47.5

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate

General acute care hospitals are required to report several HCAI All-Cause Unplanned 30-Day Hospital Readmission Rates, which are broadly defined as the percentage of hospital-level, unplanned, all-cause readmissions after admission for eligible conditions within 30 days of hospital discharge for patients aged 18 years and older. These rates are first stratified based on any eligible condition, mental health disorders, substance use disorders, co-occurring disorders, and no behavioral health diagnosis. Then, each condition-stratified hospital readmission rate is further stratified by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity. For more information on the HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, please visit the following link by copying and pasting the URL into your web browser:

[https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions\\_ADA.pdf](https://hcai.ca.gov/wp-content/uploads/2024/10/HCAI-All-Cause-Readmission-Rate-Exclusions_ADA.pdf)

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate – Any Eligible Condition

Number of inpatient hospital admissions which occurs within 30 days of the discharge date of an eligible index admission and were 18 years or older at time of admission

251

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

3117

Rate of hospital-level, unplanned, all-cause readmissions after admission for any eligible condition within 30 days of hospital discharge for patients aged 18 and older

8.1

Table 10. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate for any eligible condition by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

## HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate - No Behavioral Health Diagnosis

Number of inpatient hospital admissions which occurs within 30 days of the discharge date with no behavioral diagnosis and were 18 years or older at time of admission

104

Total number of patients who were admitted to the general acute care hospital and were 18 years or older at time of admission

1726

Rate of hospital-level, unplanned, all-cause readmissions after admission with no behavioral diagnosis within 30 days of hospital discharge for patients aged 18 and older

6

Table 14. HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate with No Behavioral Diagnosis by race and/or ethnicity, non-maternal age categories, sex, payer type, preferred language, disability status, sexual orientation, and gender identity.

<b>Race and/or Ethnicity</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>
American Indian or Alaska Native	Suppressed	Suppressed	Suppressed
Asian	Suppressed	Suppressed	Suppressed
Black or African American	Suppressed	Suppressed	Suppressed
Hispanic or Latino	Suppressed	Suppressed	Suppressed
Middle Eastern or North African			
Multiracial and/or Multiethnic (two or more races)			
Native Hawaiian or Pacific Islander			
White	91	1421	6.4

  

<b>Age</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>
Age 18 to 34	Suppressed	Suppressed	Suppressed
Age 35 to 49	Suppressed	Suppressed	Suppressed
Age 50 to 64	Suppressed	Suppressed	Suppressed
Age 65 Years and Older	83	1273	6.5

  

<b>Sex assigned at birth</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>
Female	56	851	6.6
Male	48	875	5.5
Unknown			

  

<b>Payer Type</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>
Medicare	79	1153	6.9
Medicaid	Suppressed	Suppressed	Suppressed
Private	13	333	3.9
Self-Pay			
Other	Suppressed	Suppressed	Suppressed

  

<b>Preferred Language</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>
English Language			
Spanish Language			
Asian Pacific Islander Languages			
Middle Eastern Languages			
American Sign Language			
Other/Unknown Languages	104	1726	6

<b>Disability Status</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>
Does not have a disability			
Has a mobility disability			
Has a cognition disability			
Has a hearing disability			
Has a vision disability			
Has a self-care disability			
Has an independent living disability			

  

<b>Sexual Orientation</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>
Lesbian, gay or homosexual			
Straight or heterosexual			
Bisexual			
Something else			
Don't know			
Not disclosed			

  

<b>Gender Identity</b>	<b>Number of inpatient readmissions</b>	<b>Total number of admitted patients</b>	<b>Readmission rate (%)</b>
Female			
Female-to-male (FTM)/transgender male/trans man			
Male			
Male-to-female (MTF)/transgender female/trans woman			
Non-conforming gender			
Additional gender category or other			
Not disclosed			

## Health Equity Plan

All general acute care hospitals report a health equity plan that identifies the top 10 disparities and a written plan to address them.

## Top 10 Disparities

Disparities for each hospital equity measure are identified by comparing the rate ratios by stratification groups. Rate ratios are calculated differently for measures with preferred low rates and those with preferred high rates. Rate ratios are calculated after applying the California Health and Human Services Agency's "Data De-Identification Guidelines (DDG)," dated September 23, 2016.

Table 15. Top 10 disparities and their rate ratio values.

Measures	Stratifications	Stratification Group	Stratification Rate	Reference Group	Reference Rate	Rate Ratio
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			50 to 64	5.8	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (No Behavioral Health Diagnosis)	Expected Payor			Private	3.9	1.8
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.2	1.7
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.2	1.6
California Maternal Quality Care Collaborative (CMQCC) Nulliparous, Term, Singleton, Vertex (NTSV) Cesarean Birth	Age (for maternal measures only)			18 to 29	0.2	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Age (excluding maternal measures)			50 to 64	5.8	1.5
CMQCC Exclusive Breast Milk Feeding	Expected Payor			Other	66.7	1.5
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Race and/or Ethnicity			Hispanic or Latino	5.9	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate	Expected Payor			Private	5.2	1.4
HCAI All-Cause Unplanned 30-Day Hospital Readmission Rate, stratified by behavioral health diagnosis (Mental Health	Age (excluding maternal measures)			50 to 64	7.7	1.4

#### Plan to address disparities identified in the data

All-Cause Unplanned 30-Day Hospital Readmission Rate - By Age: o Ages 35-49 are a disparity group (rate ratio 1.8); best outcomes are in ages 50-64. o Ages 65+ are also a disparity group in some analyses (rate ratio 1.5-1.4), with 50-64 as the best-performing group. - By Expected Payor: o Medicare is a consistent disparity group (rate ratios 1.8, 1.7), with Private or Other payors performing best. o Medicaid is also identified as a disparity group in some analyses (rate ratio 1.4), with Private as the best-performing group. - By Race/Ethnicity: o White patients are a disparity group (rate ratio 1.4), with Hispanic or Latino patients as the best-performing group. Actions to Address Readmission Disparities - Weekly multidisciplinary team meetings (nursing, physicians, case management, quality) to identify causes of readmissions. - Partnerships with community programs for education on risk factors (blood pressure, nutrition, infection prevention, heart health), with a goal of attending at least two outreach events annually. - Outreach and education tailored to different age groups via fairs, colleges, and nursing homes. - Target: Decrease readmission rates for disparity groups by 5% by end of 2027. Behavioral Health Diagnosis - No Behavioral Health Disorders: o Medicare is the disparity group (rate ratio 1.8); Private payors perform best. - With Mental Health Disorders (MHD): o Ages 65+ are the disparity group (rate ratio 1.4); best outcomes in ages 50-64. o Focus on Substance Use Disorder programs: educate on follow-up and medication management, aiming for 60% of patients to attend at least one follow-up visit. Maternal Health: CMQCC NTSV PC-02 - By Age: o Ages 30-39 are the disparity group (rate ratio 1.5); best outcomes in ages 18-29. - Actions: o Encourage nursing staff to complete Bundle Birth Nurses training. o Partner with payor doula programs to promote labor support and advocacy, especially for first-time mothers. o Target:

Reduce NTSV rate to less than 20% for ages 30-39 by end of 2027. Maternal Health: CMQCC Exclusive Breast Milk Feeding - By Expected Payor: o Medicaid is the disparity group (rate ratio 1.6); Other payors perform best. - Actions: o Partner with payor doula for prenatal breastfeeding education, focusing on outpatient education and follow-up. o Collaborate with high-risk labor & delivery groups to create community education programs. o Target: Achieve 75% exclusive breastfeeding rate for Medicaid population by end of 2027. Summary of Approach: The strategy centers on identifying disparity groups by age, payor, and race/ethnicity, then implementing targeted education, outreach, and care coordination. Goals are set for measurable improvement by 2027, with multidisciplinary collaboration and community partnerships as key drivers.

## **Performance in the priority area**

General acute care hospitals are required to provide hospital equity plans that address the top 10 disparities by identifying population impact and providing measurable objectives and specific timeframes. For each disparity, hospital equity plans will address performance across priority areas: person-centered care, patient safety, addressing patient social drivers of health, effective treatment, care coordination, and access to care.

### **Person-centered care**

1. Person-Centered Care o Focus on HCAHPS specifically in nursing communication, doctor communication, and care transitions. o Leader daily rounding on admitted patients focusing on individualized patient and family care needs. o Integrating person-centered care (i.e., patient experience) with quality outcomes such as readmissions and length of stay.

### **Patient safety**

- o Daily review and escalation of patient safety events to executive leadership team and the interdisciplinary leadership for transparency and awareness. o Structured critical event and adverse event review process. High Reliability Organization policies and procedures to immediately review serious safety events. Goal is to immediately investigate and mitigate patient safety issues. o Robust peer review process through the medical staff.

### **Addressing patient social drivers of health**

- o Expanded SDOH screening to ED population in addition to inpatient. o Community Health Manager establishing relationships with local food banks, charities, and other community members to build programs to help address common gaps. Hosting and funding community event to educate high risk groups. o Working with local Symba center that provides temporary housing and support for patients who meet criteria and require transitional care to acclimate back into the community.

## **Performance in the priority area continued**

Performance across all of the following priority areas.

### **Effective treatment**

- o Focus on specific outcome measures that correlate with effective treatment: length of stay and readmissions. o Focus on appropriate transitional care and discharges. High priority areas specific to the organization surround medication reconciliation and home health coordination. o Daily case management and physician advisor review of high risk cases and utilization review. o Daily review and confirmation of appropriately placing patients in observation status or admission. Ensuring timely reassessment of observation patients to progress the patient to the next appropriate disposition (i.e. admission or discharge)

### Care coordination

- o Focus on entire care continuum from pre-hospital arrival, admission, and discharge. o Focus on early identification and notification from EMS or incoming strokes, STEMI, trauma, etc. Goal is to provide timely and appropriate care to minimize and reduce long term complications or the patient.
- o Due to community factors and common patient related factors, identified a need to focus on appropriate palliative care and hospice referrals. Engaging palliative care team more timely. Referral on 100% ICU patients. Trying to engage palliative care consistently for certain high risk diagnoses such as CHF, AMI, STEMI, etc

### Access to care

- o Case Management SDOH assessment and connecting patients with certain qualifying programs (e.g., Symba Center, Home Health) o Community Health providing resources to local food banks, free clinics, community health drives, etc. o Established Internal Medicine Residency Program and Pharmacy Residency Program to appeal to newer providers. Goal is to increase the number of providers who stay in the hospital and the community. Plan to close the large gap of primary care providers available in the community.

## Methodology Guidelines

Did the hospital follow the methodology in the Measures Submission Guide? (Y/N)
