

Providence Virtual EEG

Enables remote electroencephalogram (EEG) testing, interpretation and neurology care from a virtual neurologist who is an expert in epilepsy and interpreting EEGs.

- Enterprise-wide acute inpatient consultative service
- Routine EEGs completed within 24 hours, STAT requests in under 2 hours
- Services are offered 24 hours a day, 365 days a year
- Supports all patient types: adult, pediatric, and neonatal
- Contact us at: vcdhpartnerships@providence.org

Key Components

Common Consultations

- Seizures
- Epilepsy

An Extension of Your Care Team

Through expert EEG interpretation and clinical consultation, our epileptologists partner with onsite physicians to support diagnosis, guide treatment decisions, and enhance patient care.

Enabling Technologies

The Virtual Care & Digital Health (VCDH) team supports partner sites and provides ongoing 24/7 technical support with Providence caregivers specifically trained in Virtual EEG technology and workflows.

Committment to Quality

Lead by board certified neurologists, our team provides clinical quality oversight including monitoring program outcomes, conducting a monthly provider case review, and regular data reporting.

Creating Significant Value

Increase satisfaction of ordering providers and better care for patients

Enables earlier treatment decisions and better outcomes for patients

Supports local care, reducing the need for patient transfers

Utilization-based service model with pay-per-read pricing
