Providence Virtual NeuroHospitalist

Virtual NeuroHospitalist provides non-urgent neurology consults for admitted adult patients. This service is intended for stable patients who need to be assessed by a neurologist.

Service includes both newly admitted patients and those previously evaluated through our Emergent service who require follow-up.

Service available 7 days a week; typical rounding hours are 8am-5pm PST.

Consult requests are initiated and managed through an easy-to-use online portal.

Enabling Technologies

The Virtual Care & Digital Health (VCDH) team supports partner sites through the purchasing and set-up of all technology and provides ongoing 24/7 technical support with Providence caregivers specifically trained in virtual Neuro technology and workflows.

Committment to Quality

Lead by board certified neurologists, our team provides clinical quality oversight including monitoring program outcomes, conducting a monthly provider case review, and regular data reporting.

Creating Significant Value

Rapid intervention leads to better neurological outcomes.

Keeps care local through integration with onsite teams to provide ongoing care for admitted patients.

Ensures equitable access to expert neurological care, regardless of hospital size or location.
