SPECIAL NOTICE

Many insurances do not cover services when a child is referred for a delay in normal development or has a diagnosis showing neurological involvement. If your insurance plan does not specifically have a neurodevelopmental benefit (usually covers until age 7), then your regular benefit for therapy may not cover your child's diagnosis.

How to determine if your child's diagnosis will be covered by your regular therapy benefit:

- 1. If your child has normal function and it was lost due to an injury or illness, your regular therapy benefit may cover.
- 2. If your child is being referred because of a delay in normal development, such as speech delay (not talking or difficulty with talking) or lack of muscle strength, coordination or balance, then your child's therapy may not be covered under the regular therapy benefit. However, therapy may be covered if your policy has a neurodevelopmental benefit and your child meets the age requirement. This benefit usually requires prior authorization.

St. Luke's will submit all services to your insurance company. Please be aware that you are financially responsible if the services are not covered under your specific plan.
